MY WORK

TechNation - This website was built for a client who needed a completely custom Content Management System. Using Angular, NodeJS, Express and MongoDB I created a dashboard that allows the site to be customized according to the needs of the business.

Project Janus - Janus is a prototype put together over the span of 3 days for a hackathon. It uses facial recognition technology to recommend music based on a users mood, and is powered by the Spotify and Oxford Emotion API.

Tech: Angular, jQuery, PHP, HTML5/CSS3, JavaScript

My role in this project was to work with the webcam and the Oxford Emotion API.

SKILLS

- Angular JS
- Node JS
- Mongo DB
- Express JS
- JQuery
- Vanilla Javascript
- HTML & CSS

EXPERIENCE

Code Mentor, Coding House

Fremont, CA — 2016-Current

Help junior understand Javascript and the web development lifecycle.
